

Specialist **Transmission** & **Grid** Inspection & Integrity Services

SARA
ROPE ACCESS GLOBAL

Who We Are

SARA Rope Access Global is a specialist access and technical services company operating in high-risk industrial and infrastructure environments.

Our team combines certified rope access technicians with practical engineering and construction experience to support inspection, maintenance and structural work at height.

We operate in sectors where access constraints, safety requirements and programme pressure demand disciplined execution.

Our work is guided by three core principles:

- ✔ Safety first execution
- ✔ Technical competence
- ✔ Minimal disruption to ongoing operations

Our rope access systems comply with recognised international and national working-at-height standards and are implemented through structured safety procedures and continuous training.

Meet our Team

Projects Co-ordinator

South Africa's energy transition is increasingly dependent on the expansion and reliability of the national transmission grid. As new generation capacity is added to the network, transmission infrastructure must grow rapidly to connect power projects to the national system.

Large-scale transmission construction programmes involve complex engineering environments where work at height, structural verification, and safe access to difficult areas are critical to maintaining construction timelines and quality assurance standards.

SARA Rope Access Global supports engineering and construction teams operating in these environments by providing specialist access and technical field services on complex infrastructure assets.

Our teams work alongside EPC contractors, construction managers and asset owners to safely execute tasks in locations where traditional access methods are difficult, inefficient or impractical.

About Us

"Creating impactful solutions" is our motto

We utilize industry best practices to provide effective solutions to our clients. SARA Rope Access Global SA (Pty) Ltd is **dedicated to offer impactful solutions that solve complex problems safely and efficiently**. We take pride in our highly skilled and experienced team of experts who ensure our work meets the highest international standards. Our foundation of experience and construction expertise inspires us to use all our knowledge, skills, and technical tools to help projects flourish.

Our commitment to timeliness, attention to detail, and a service-oriented approach reflect our unwavering professionalism, integrity, honesty, and fairness with our clients, subcontractors, and suppliers.

Our Vision & Mission

Our vision is to be the world's most dependable, innovative and safe working at height, service and solution provider in the world.

Our mission is to supply high-quality working at height services and solutions to a worldwide client base while utilising innovative technologies within an environment of motivated employees, focused on continuous improvement, highest business standards, work ethics and corporate citizenship, leading to added value for our customers and sustained return on investment.

We aim to become your trusted long-term partner, not be a once-off contractor.

About Us

Our Values

At SARA Rope Access, individuals come together as a family with boldness, learning, and determination to tackle challenges beyond the norm.

Together we grow, develop new skills, learn from one another, and relentlessly pursue impactful solutions. An unwavering commitment to teamwork and fun makes a force to be reckoned with.

YOUR TRUSTED PARTNER

A specialist structural access and execution partner for transmission infrastructure

How we will partner with you

Transmission line construction involves several phases where specialist access teams can support EPC contractors and project managers. These typically include:

- ✓ tower erection support
- ✓ structural inspection and verification
- ✓ post-construction snagging and correction work
- ✓ installation and maintenance of safety systems
- ✓ inspection of completed infrastructure
- ✓ ongoing maintenance work on operational assets

While cranes and mechanical access equipment remain essential tools during construction, certain environments and structural locations require more flexible access solutions.

Rope access allows safe and efficient work to be carried out at height without extensive temporary works, reducing disruption to surrounding construction activities.

Our services that will support you

Tower Inspection & Structural Verification

Our teams provide access for structural inspection and verification work on transmission towers and associated infrastructure.

- bolt inspection and verification support
- structural component inspection
- corrosion monitoring
- photographic and technical reporting

Work-at-Height Technical Support

We assist construction teams in performing work on tower structures and related assets where access is challenging.

- installation work at height
- minor structural corrections
- hardware installation support
- inspection preparation prior to stringing or commissioning

Safety System Installation

Transmission towers and monopoles increasingly require fall protection systems to ensure safe future maintenance. SARA teams support the installation of:

- fall arrest systems
- ladder safety systems
- anchor points and safety hardware
- inspection and verification of installed systems

Inspection & Maintenance of Operational Assets

Once infrastructure is operational, rope access teams can support inspection and maintenance activities such as:

- structural inspections
- corrosion assessment
- repair work
- asset integrity monitoring

These services allow infrastructure owners to maintain assets safely without large access structures.

Why Specialist Access Matters in Transmission Projects

Transmission construction programmes operate under tight schedules and complex environmental conditions. Specialist access teams can provide several advantages to construction and operations teams:

- safe access to difficult structural locations
- reduced need for temporary scaffolding or heavy equipment
- minimal disruption to surrounding construction activities
- flexible deployment in remote or constrained environments
- efficient completion of inspection and corrective work

By enabling safe work at height in complex environments, specialist access teams help maintain project momentum and support construction quality.

Safety & Professional Standards

Safety is the foundation of all SARA operations. Our teams are trained and certified in recognised rope access systems and operate under strict safety procedures. Key aspects of our safety framework include:

- certified rope access technicians
- detailed risk assessments and method statements
- continuous training and competency evaluation
- structured supervision on site
- strict compliance with client safety protocols

This disciplined approach has enabled us to maintain a strong safety record across our projects.

Working With EPC Contractors & Infrastructure Owners

SARA regularly works alongside engineering firms, EPC contractors and asset owners on projects where specialist access capability is required.

We understand the operational realities of construction sites and infrastructure environments, including:

- tight construction schedules
- complex safety requirements
- coordination with multiple contractors
- the need for accurate technical reporting

Our teams integrate with existing project structures and support site teams in executing work safely and efficiently.

Looking Ahead

South Africa's transmission network will play a central role in enabling the next phase of the country's energy transition.

As grid expansion programmes accelerate, specialist execution capability will be required across a wide range of infrastructure environments.

SARA is positioning itself to support these programmes through disciplined, safety-focused work-at-height services that assist engineering teams in delivering complex projects successfully

Safety is our first priority

All Rope Access **Services**

Stadiums

We offer rapid inspections, fast turn around times, and specialist maintenance and cleaning services for stadiums across South Africa.

FMCG

SARA Rope Access is the industry leader in the Fast Moving Consumable Good sector for maintenance and repairs when rope access is needed. We deliver fast turn-around times, and high quality work at reduced costs and zero disruption.

Renewable Energy

SARA Rope Access Global provides key services and support for the construction and maintenance of Renewable Energy projects.

Property Management

SARA Rope Access Global is your rope access specialist when needing to plan facade or roof maintenance on your estate or high rise building.

C&I Solar

SARA Rope Access Global provides key services and support for the inspection and maintenance of Commercial & Industrial Solar projects.

Agriculture

Working at heights in the agriculture industry is a critical service that ensures safety and efficiency in tasks such as orchard maintenance, silo inspections, and barn construction.
